Bring the evidence into view.

Use an iPad to explore twelve objects in 3D.

SCAN TO OPEN THE WEBSITE

ragingaxolotl-art.github.io/otzi-ar-field-lab

01 Open the link in Safari. Tap Start camera.

02 Allow the camera. Point at a numbered floor card.

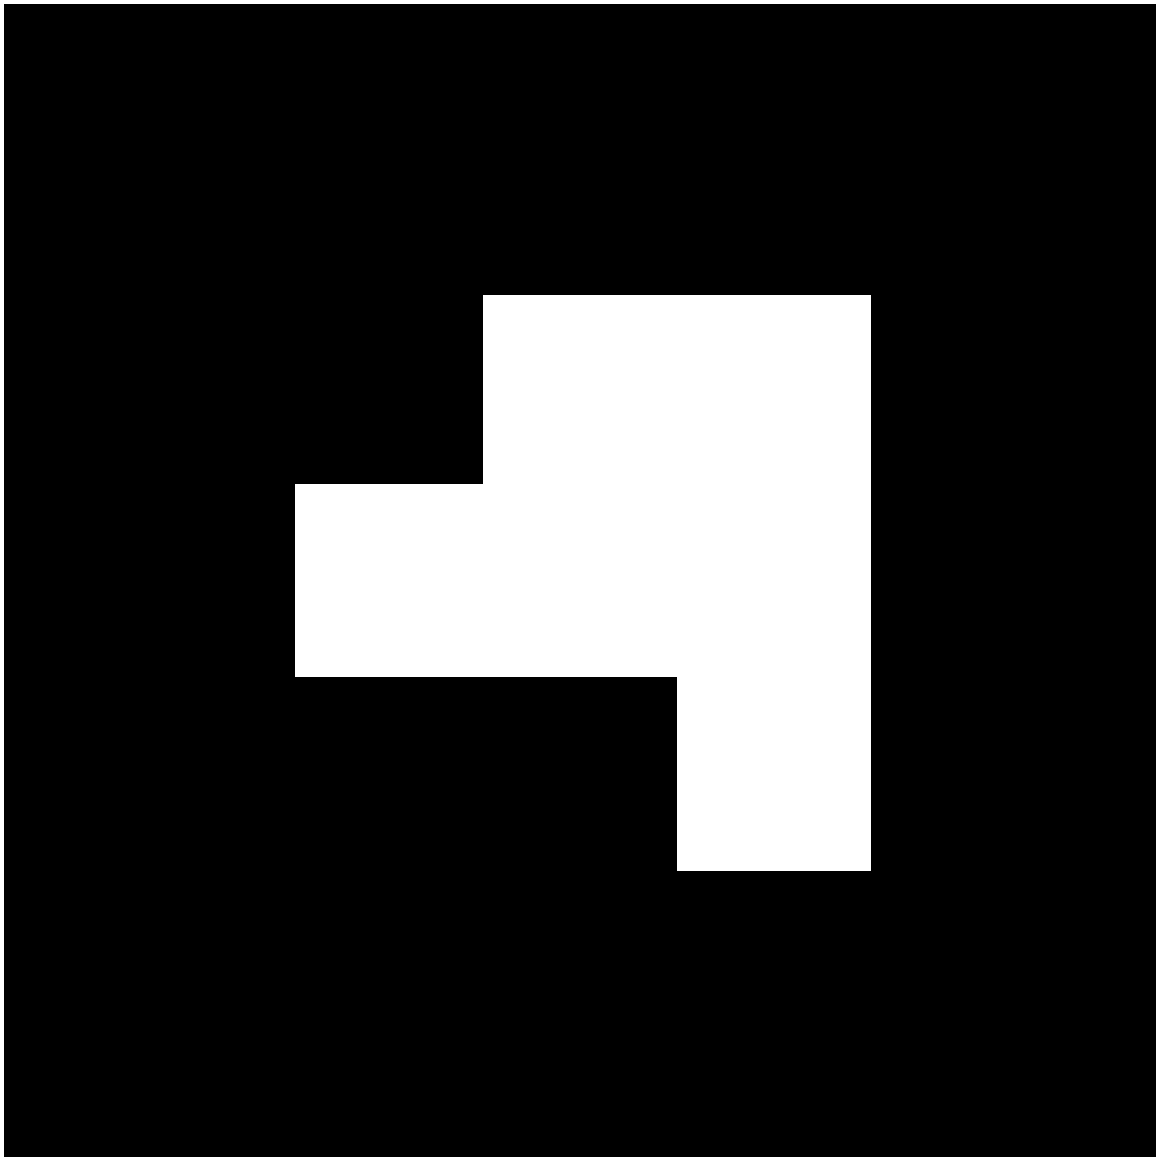
03 Keep the whole black square in view. Look from different angles.

04 What is the object? Reveal its name after making a prediction.

Illustrative teaching models - not museum scans - not to scale

SETUP REQUIRED: publication is pending. This launch QR is not ready for student use.

EVIDENCE 01



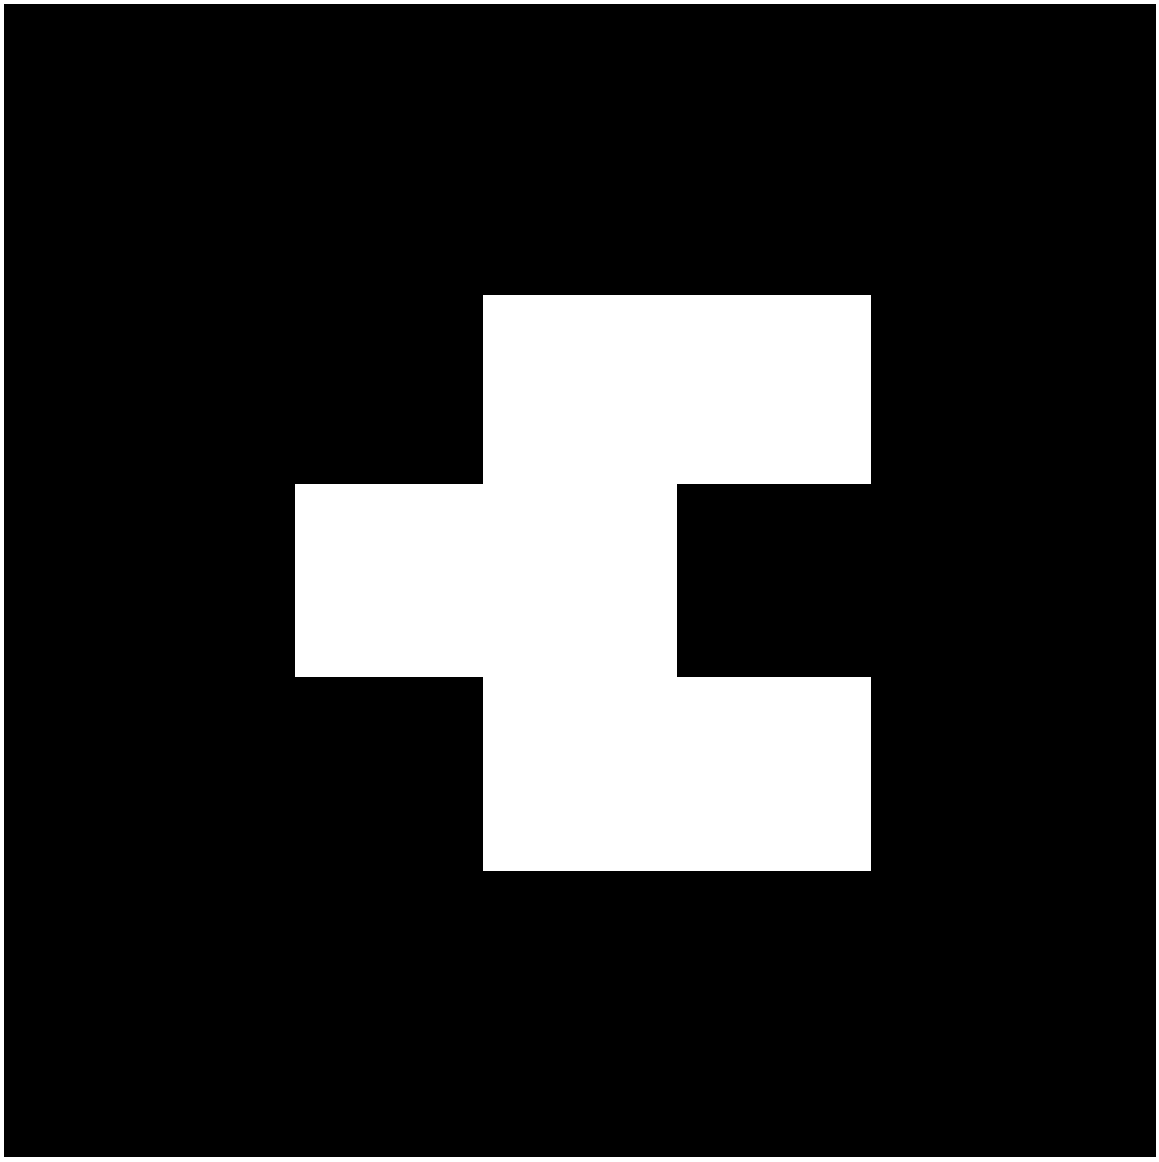
Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 1 of 12

EVIDENCE 02



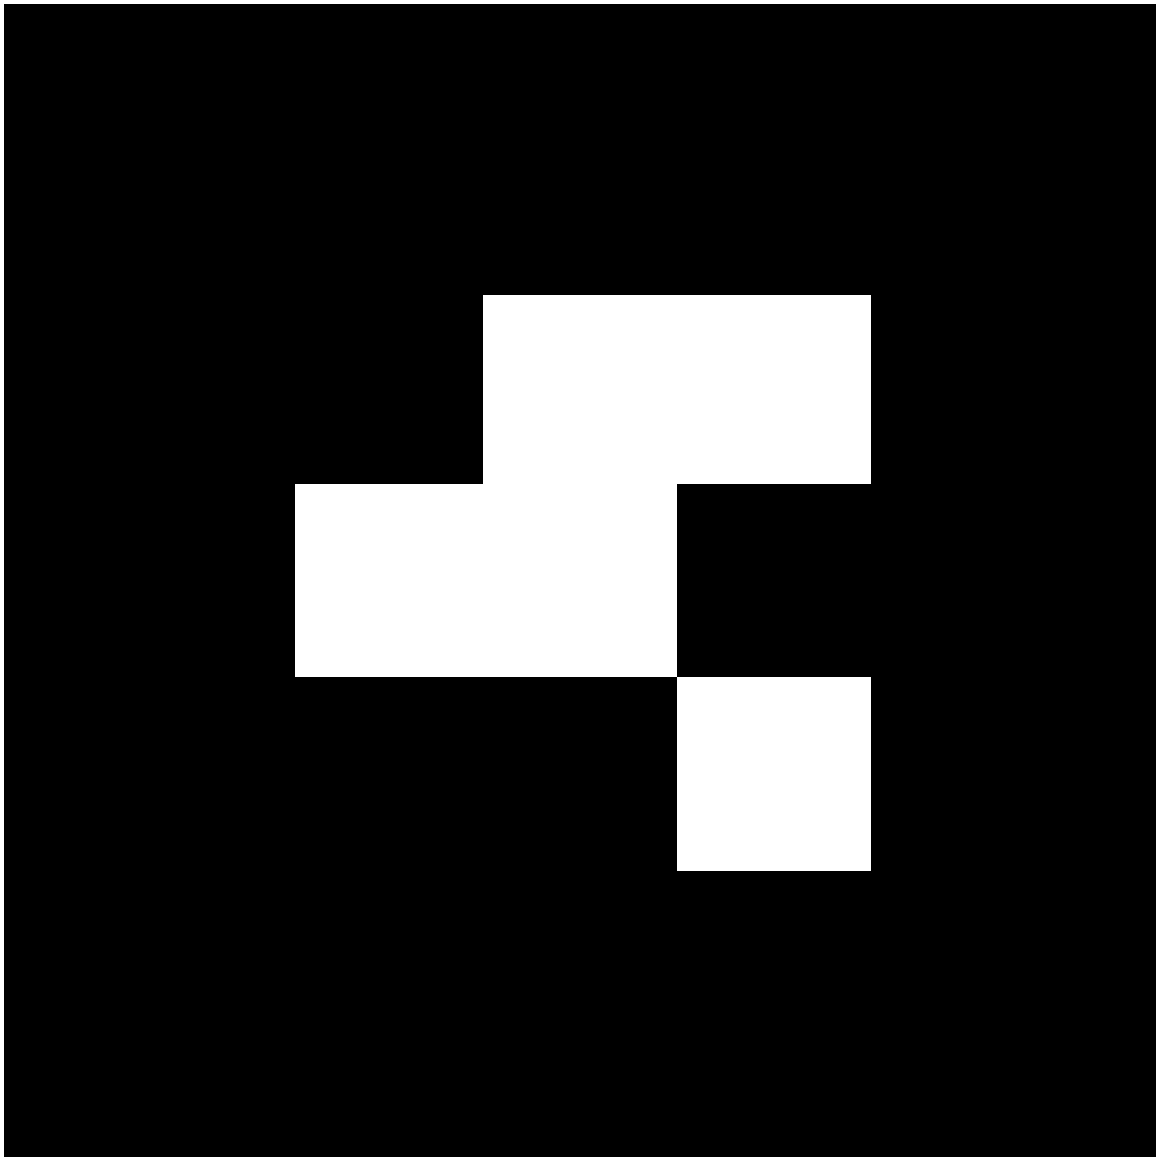
Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 2 of 12

EVIDENCE 03



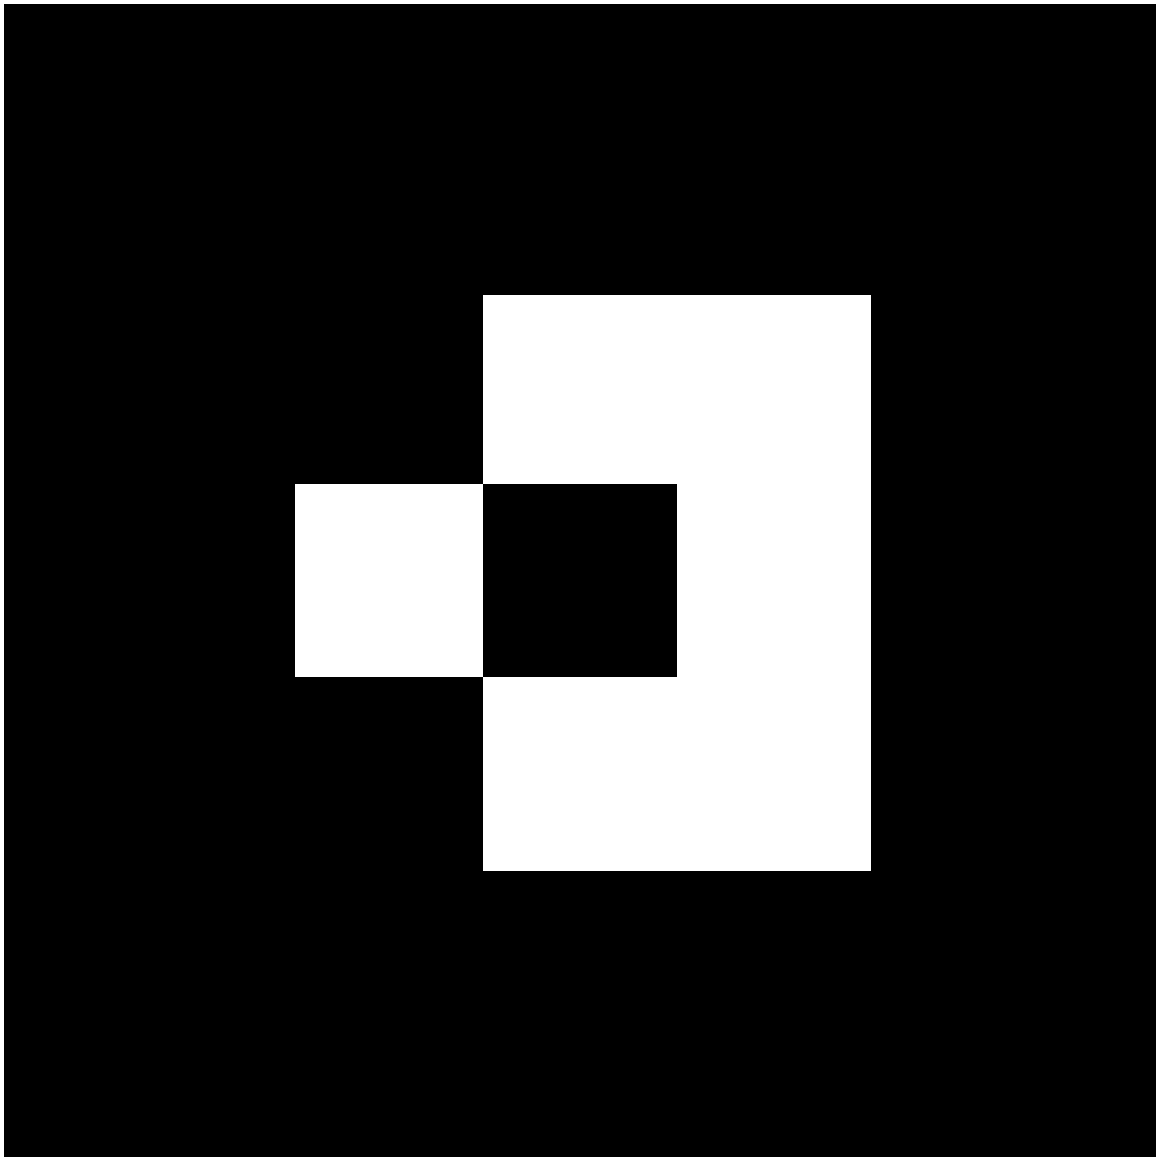
Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 3 of 12

EVIDENCE 04



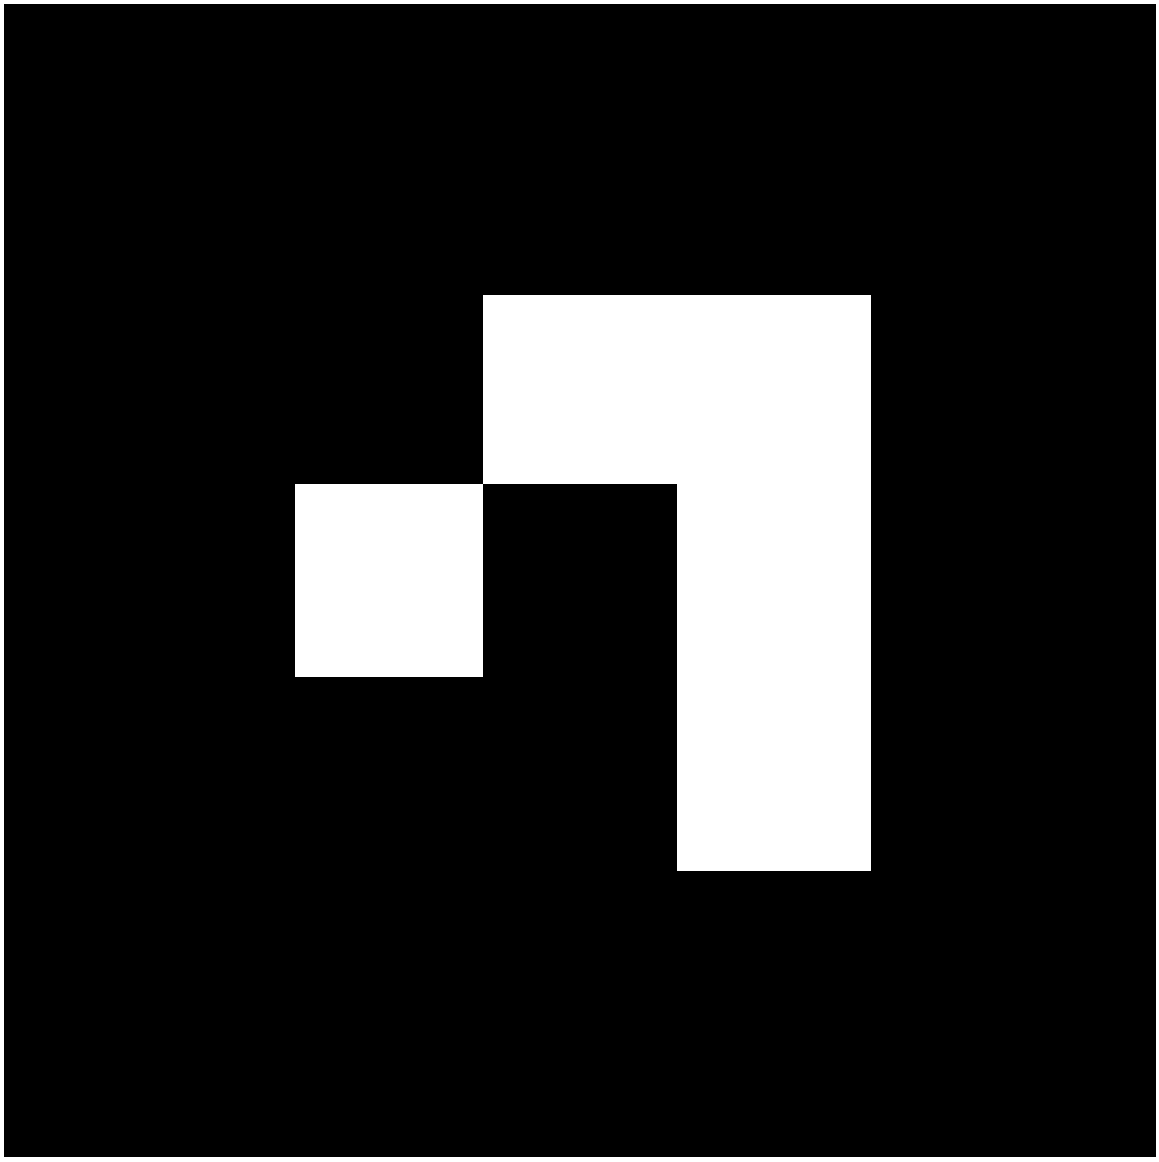
Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 4 of 12

EVIDENCE 05



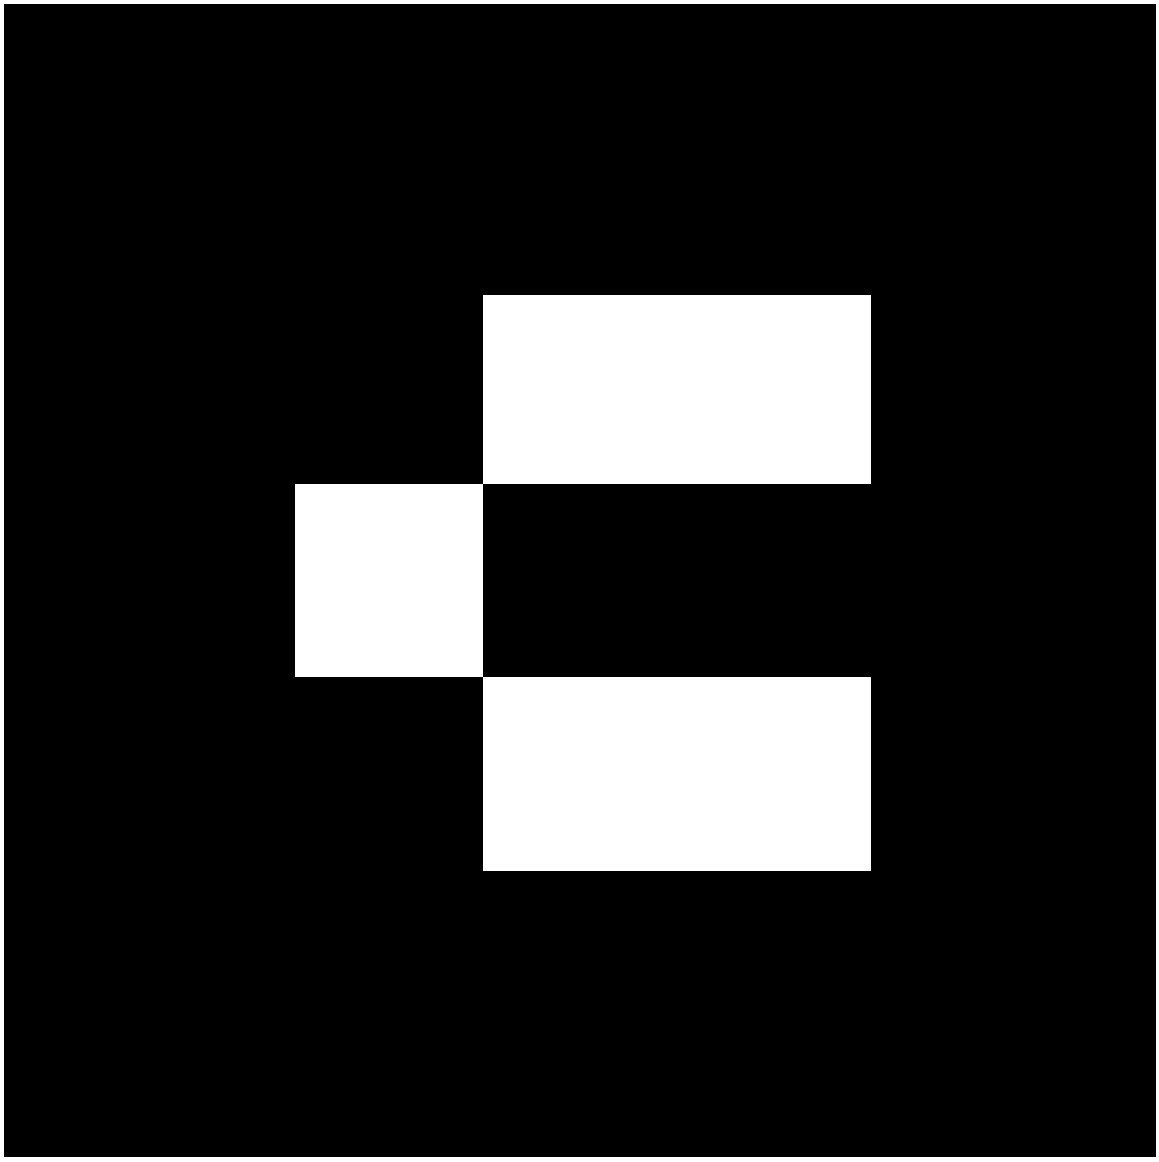
Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 5 of 12

EVIDENCE 06



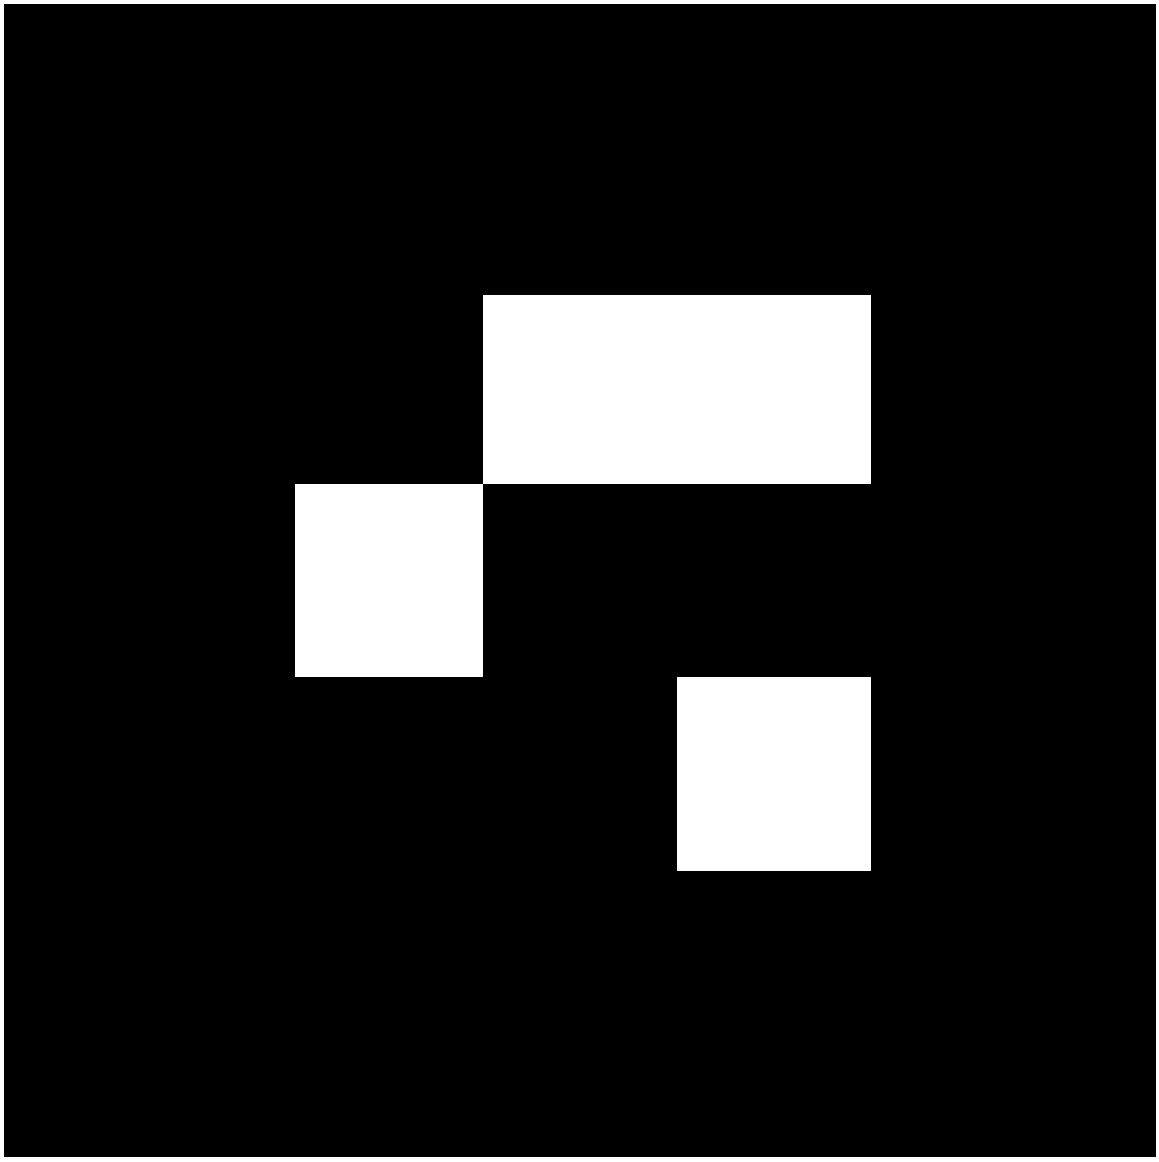
Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 6 of 12

EVIDENCE 07



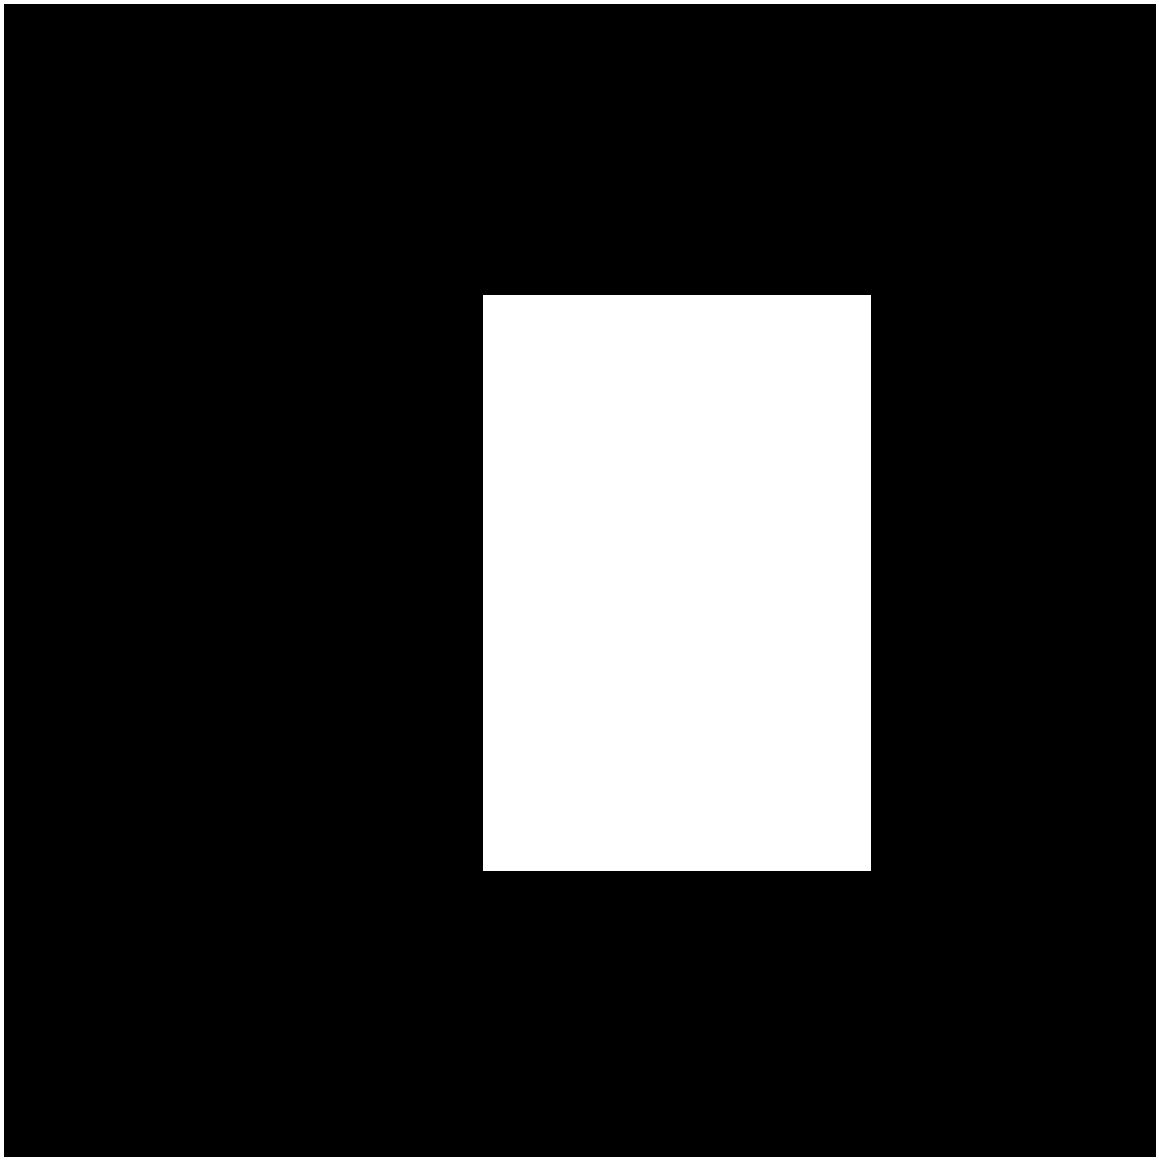
Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 7 of 12

EVIDENCE 08



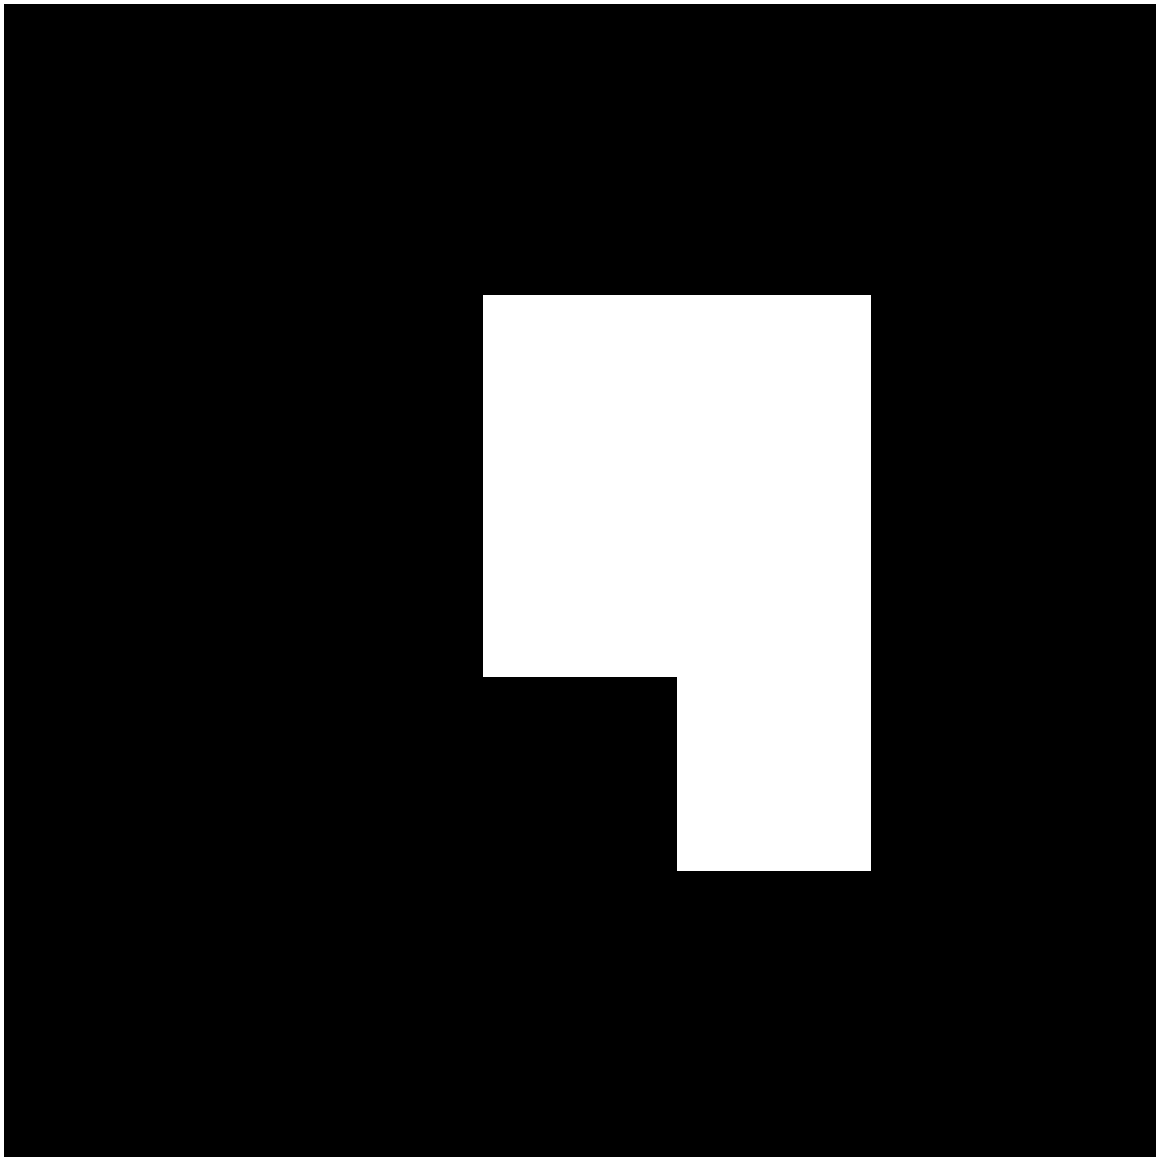
Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 8 of 12

EVIDENCE 09



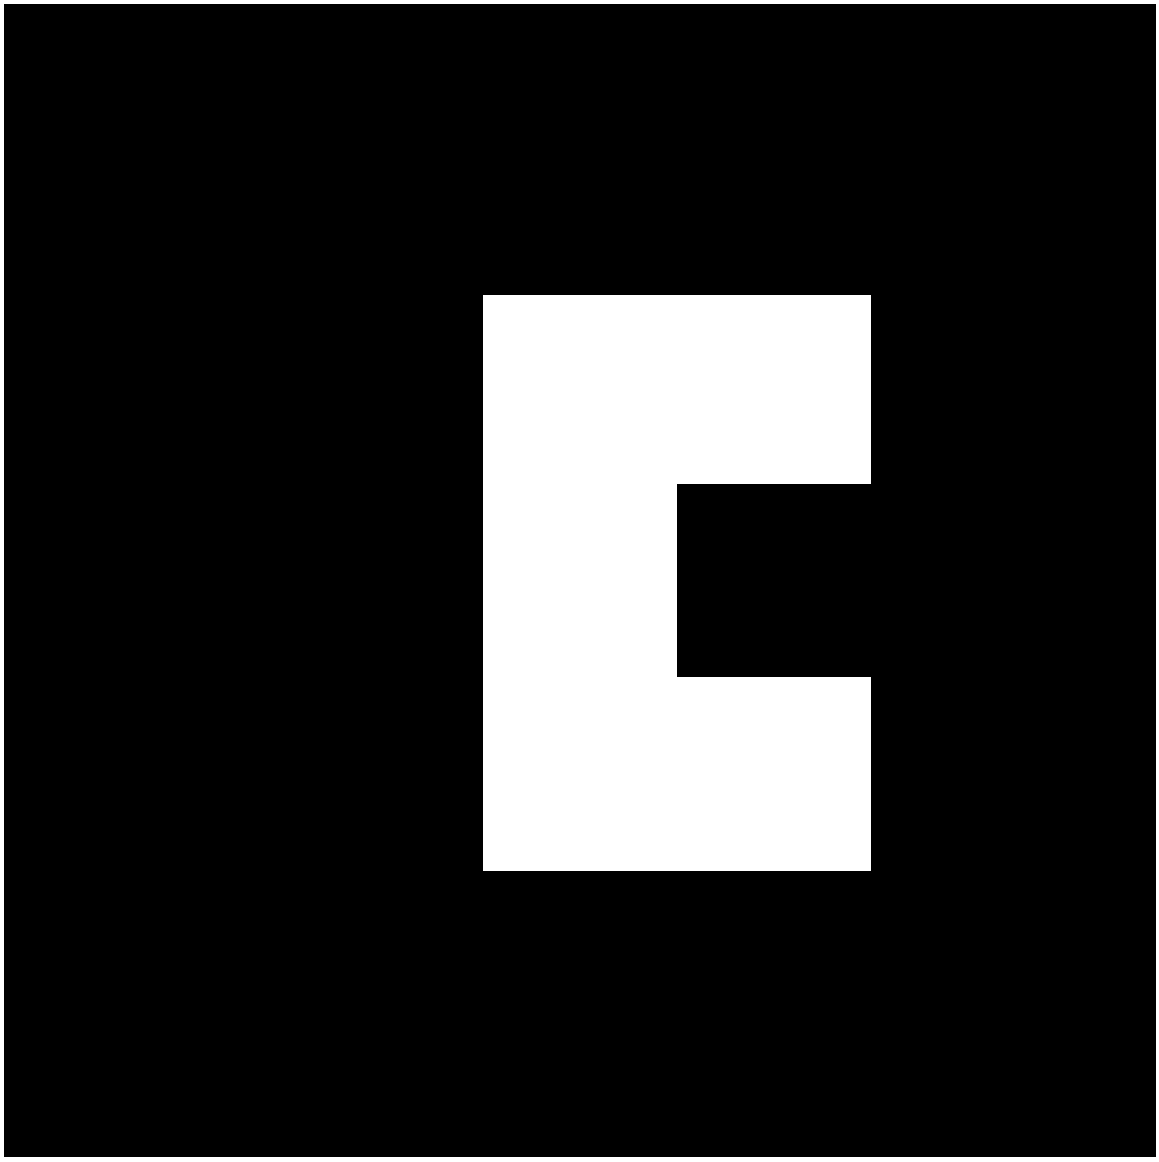
Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 9 of 12

EVIDENCE 10



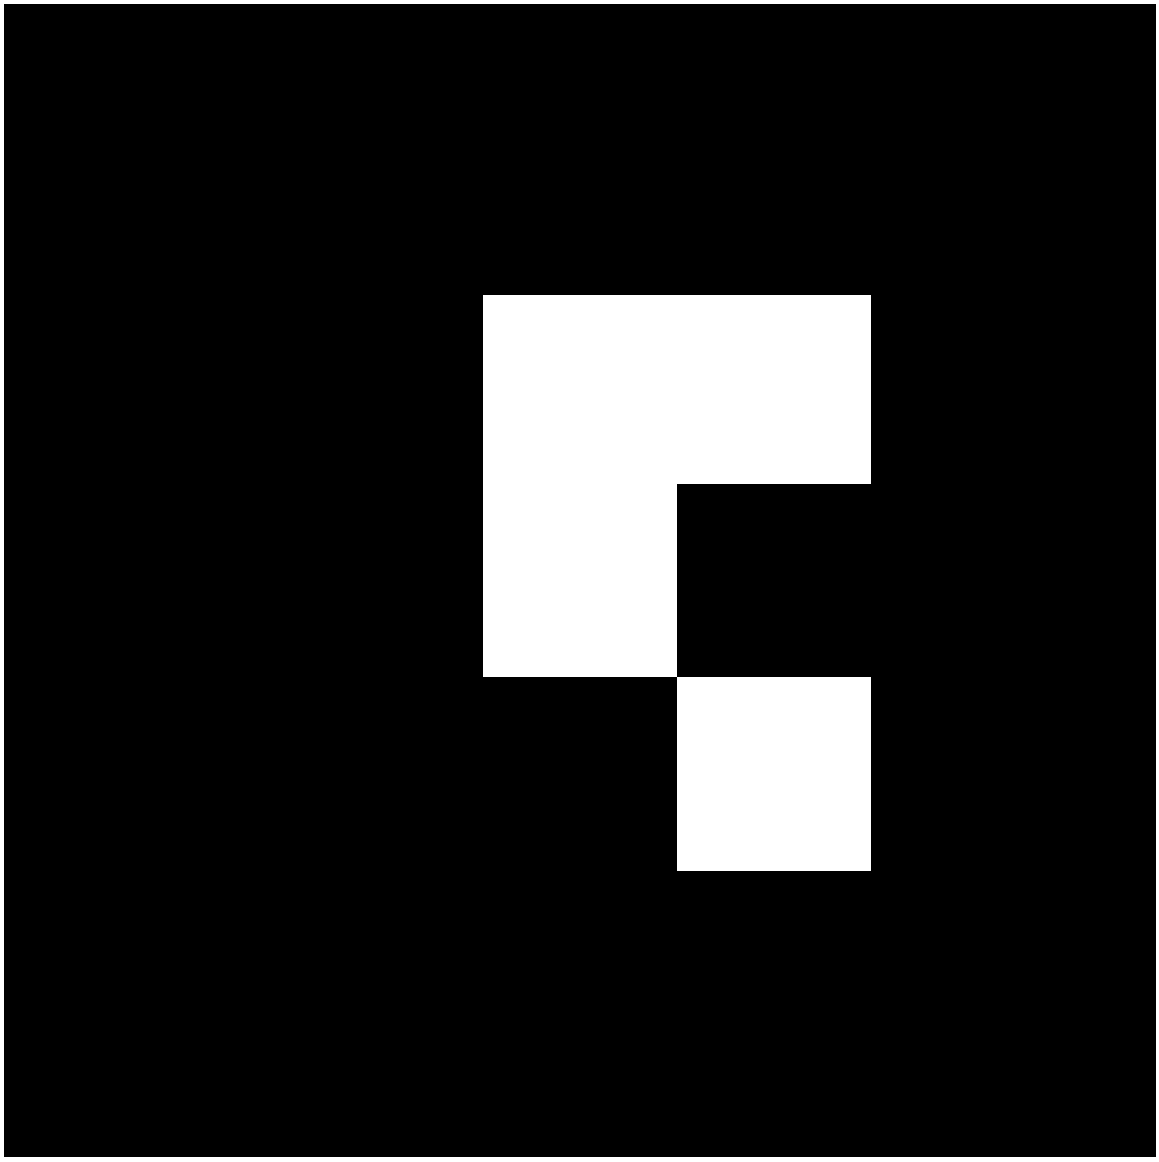
Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 10 of 12

EVIDENCE 11



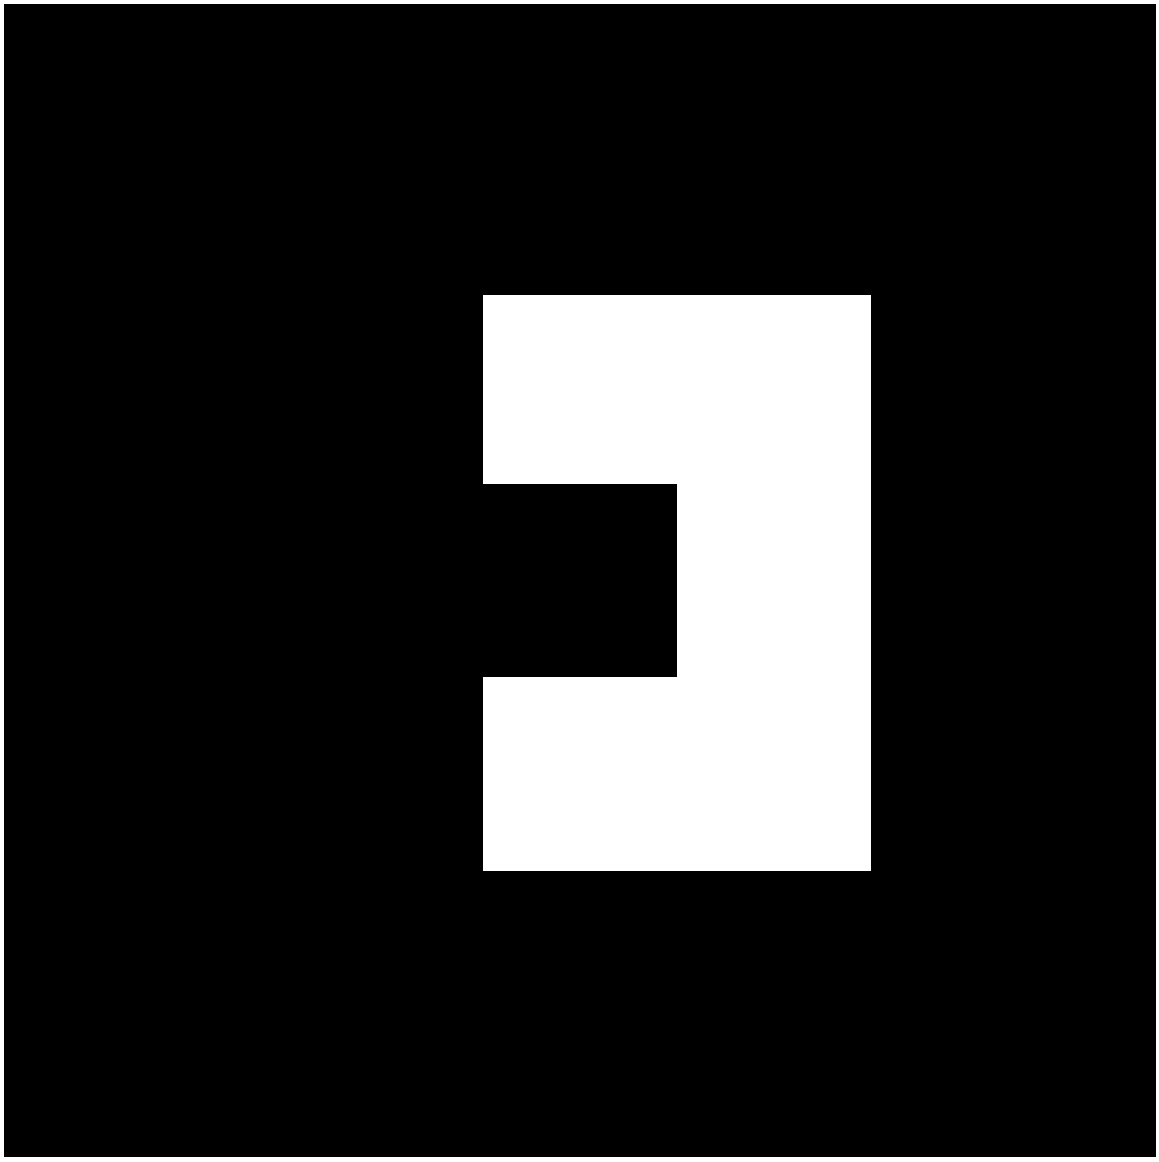
Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 11 of 12

EVIDENCE 12



Open the Field Lab scanner in Safari.

Keep this whole square in the camera view.

Look closely. What could this object reveal?

3D teaching reconstruction / Card 12 of 12

Place the evidence around the skeleton.

These are suggested classroom positions, not original discovery locations.

CARD	ARTIFACT	SUGGESTED PLACEMENT
01	Birch-bark container	Beside a hand or the equipment area
02	Leather leggings	Beside the lower legs
03	Bearskin cap	Beside the head
04	Arrows	Beside the equipment area
05	Hide coat	Beside the torso
06	Copper axe	Beside one hand
07	Flint dagger	Beside the hip
08	Retoucheur	Beside the tool area
09	Stone disc and tassel	Beside the hip or equipment area
10	Shoe netting	Beside the feet
11	Grass mat	Beside the torso or equipment area
12	Backpack frame	Beside the shoulder or equipment area

Quick setup

Print page 1 as the launch sheet. Pages 2-13 are the 12 floor cards.

Test page 7 (card 06) on a school iPad before printing the full set.

Keep the paper flat and matte. Leave all black edges and white margins intact.

Allow Safari camera access. Start roughly 40-70 cm above a card.

Leave walking room and roughly 30 cm between cards. Scan one card at a time.

The model remains attached only while its full marker is in camera view.

Compare the 3D teaching model with the original class reference photograph.

Names checked against the South Tyrol Museum of Archaeology (iceman.it).
